

## Lloyd's of London, Canada

*"UniKix Transaction Processing Environment software from Clerity enabled Lloyd's to gain new functionality and flexibility in its IT system, allowing the business to grow."*

*Gary Hynes, Manager of Technical Support and Operations,  
TELUS Enterprise Solutions*

### Highlights:

- Reduced processing time by 10%
- Improved performance and stability
- Significantly reduced IT costs
- Protected investment in legacy applications
- Enabled expandable infrastructure to more easily meet new business challenges

### Migrating mainframe applications to reduce costs

Lloyd's of London is without a doubt the world's leading authority on risk solutions. Best known for insuring unusual risks for more than 300 years, Lloyd's underwriters have often been willing to insure new and difficult risks. Today Lloyd's is the world's leading insurance market providing specialist insurance services to businesses in over 200 countries and territories. Lloyd's is the market leader in Canada in premium volume in aviation and marine insurance, and also handles a very large part of the property, liability, and energy insurance markets. Lloyd's Canada has annual revenues of more than half a billion dollars, representing business from 500 brokers across Canada.

Lloyd's Canada faced a challenge to provide better service to its brokers and attract new business. Lloyd's existing mainframe was limiting business expansion, and the organization needed a more open system to provide large amounts of data quickly to the broker network spanning the country. These needs could best be met with an IT system offering flexibility, security, improved productivity and performance, support for new technology, and reduced costs. Lloyd's chose Clerity and TELUS Enterprise Solutions to protect the company's huge investments in legacy software, and move critical business operations to cost-effective and flexible open systems while delivering the performance and productivity that an operation the size and stature of Lloyd's requires.

Lloyd's moved 2,628 programs, 703 screens, 1,050 files, 3,514 batch jobs and over 2 million lines of code to an open systems server using UniKix™ Mainframe Relosting software from Clerity in just over a year. As a result, processing time improved by 10 percent or more, and the company now has the capability for expansion that was not possible with its mainframe.

The reduced cost of operations of the open environment versus the mainframe enabled Lloyd's to offset the cost of the migration project quickly, allowing the company to use these cost savings for additional development and new technologies, which are essential to serving its brokers well and expanding the business.

## About Clerity

Clerity is a leading full-service provider of legacy migration, modernization, and optimization solutions. Drawing from over 16 years of experience, Clerity provides an evolutionary path forward for key IT environments tailored to the specific requirements of your business. Clerity recognizes that companies have significant investments in core applications and procedures and provides a wealth of low risk, high value tools, technology, and services to reduce IT costs without sacrificing current functionality and service level agreements.
