

Clerity Mainframe Rehosting Software

Rebranding announcement

At a glance

Over the past six months, Clerity has made great strides in growing its rehosting business and we have also been listening to our customers. One step we are taking to simplify our branding process and reaffirm our commitment to delivering comprehensive and flexible solutions is to adopt “UniKix” as the official name brand of our mainframe rehosting suite of offerings.

Product names will no longer contain a specific platform or corporate designation. Instead, they will reflect rehosting’s original emphasis on multiplatform, open systems support.

We are not eliminating products, but are instead improving the way we name them, reflecting our commitment to become the global leader in the mainframe migration and legacy modernization market.

What is not changing?

Clerity remains committed to product continuity, development, and support for all current and future rehosting customers worldwide. Over the next several months, you will see new product releases, additional platform choice, as well as an emphasis on growing our user community.

What is changing?

New names will be released in a phased roll-out over the next 4 months. New names will generally be phased in as materials come due for revision or as new materials are created. During the transition period, Clerity will not eliminate the use of old names, but will lead with new names and then reference old names in subtext – e.g., “UniKix™ Transaction Processing Environment software (formerly known as Clerity Mainframe Transaction Processing software).”

As we go through this transition, we would like to take this time to thank you for your continued patience. It is our top priority to provide excellent service and ongoing communication so the rebranding process will be as seamless as possible.

What are the new names?

The table below reflects new product names to be adopted.

New Name	Former Name
UniKix™ Transaction Processing Environment software	Clerity Mainframe Transaction Processing Software
